

Connect Wallet

Start by going to staking.illuvium.io

In the top right-hand corner, click “Connect wallet. “

Next, choose the type of wallet you wish to connect. We currently support the following wallet types:

Browser-based wallets

These wallets can be used via browser extensions on your PC, Mac, or the mobile app's built-in browser.

Web wallets

These are wallets that can be used with a log-in via a custody service or allow you to connect via a QR code such as WalletConnect and Coinbase Wallet.

Hardware wallets

We currently only support basic Trezor connections as a hardware wallet. We aim to extend our support of hardware wallets soon and allow for selecting different Trezor accounts when connecting to the app in a feature release.
