At Gelato, we have a strong ecosystem of vetted 3rd party infrastructure providers for rapid deployment of your tailored App or Ecosystem chains. At Gelato, we handle all heavy lifting—no negotiations or manual setups are required. Gelato Rollups go beyond standard offerings by integrating essential services from the Genesis block onwards. Each Gelato RaaS chain comes equipped with;

RPC : Query and transact with your rollup via high-performance APIs

[Block Explorer](#) : View and search transaction histories, block details and network activity

[Bridge UI](#) : Easily transfer assets between your rollup and its Layer 1 network

TX Debugger : Inspect, trace and debug transactions to help identify and fix issues

[Account Abstraction](#) : Simplified user accounts based on smart-contracts

[Web3 Functions](#) : Comprehensive automation solution supporting both on & off-chain data

[VRF Randomness](#) : Secure and verifiable way to generate random numbers

Multi-sig Support : Enhanced security requiring multiple parties to agree on tx executions

[On/Off-Ramps](#) : Easy conversion between fiat currencies and your L2 cryptos
