Create a Web3 Function Task Before creating a Web3 Function Task, make sure to Deploy a Web3 Function! Check out [Test, Deploy & Run Typescript functions](#) , [Test, Deploy & Run Solidity Functions](#) & [Initiate an Automated Transaction](#)

Overview

A Web3 Function Task links your Web3 Function to your target smart contract and enables you to configure what should trigger your Web3 Function to execute, any arguments you want to pass to it and the target smart contract to execute.

Ways to submit Web3 Function Tasks
