

Hi Taiko team, I can't access the discord as it's full and I've tried doing you guys on Twitter but got no response so I am asking my question here. I apologize if this is the wrong place.

I'm trying to run a proposer but had issues being able to actually make proposals. I have the full node setup properly using simple-taiko-node

, but the proposer is not submitting anything for some reason despite having a holesky node, filling out the I1 endpoints and enabled the right env configs.

Can I please get into contact with someone that can help debug the issues I am having for running a proposer?
