

Dear Lido Community,

welcome to our monthly news where we keep you up to date about our activities to create a safe Ethereum environment.

OBOL TESTING FOR HOLESKY

We conducted comprehensive, in-depth testing for Lido's integration of OBOL on Holesky on the OBOL community testnet. These tests are divided into 7 teams per cluster, and we were made cluster coordinator in our group. So far, the tests are running very well, but are not finalized yet.

SSV TESTING FOR HOLESKY

We conducted comprehensive, in-depth testing for Lido's integration of SSV on Holesky on the SSV community testnet. These tests are divided into 7 teams per cluster, and we were made cluster coordinator in our groups. So far, the tests are running very well, but are not finalized yet.

NODE/VC UPDATES

Also, we updated several of our node and validator clients to secure safe operation.

DEVCONNECT ISTANBUL

A great experience we had at Devconnect in Istanbul was the perfectly organized Lido Connect event, where we learned a great deal about Lido's plans for Ethereum.

[See the event here](#)

COMMUNITY STAKING MODULES

Connected to this, we are looking forward to the development of Lido's new project, Community Staking Modules. This will be a new module which enables also smaller stakers to participate on Ethereum. As we always strive to enhance decentralization on Ethereum, we are already working on how Community Staking Modules can be integrated into Stereum.

SEASON'S GREATINGS

As this is the last RockLogic monthly note for this year, we wish you all Happy Holidays, a hilarious Silvester party and a Happy New Year 2024!

All the best,

your RockLogic Team
