

We have launched the Arbitrum Delegation Frame on Farcaster. We wanted to create a simple way for anyone to check their ARB delegation and re-delegate to active delegates. The goal is to make the delegation process straightforward and easy to understand.

You can test out The Arbitrum Delegation Frame here: <https://warpcast.com/tempetechie.eth/0x2f1c4fcf>

Below you can find a description of the frame functions and how they work.

Check My Delegate

The first call to action is there to hook users into their first interaction with the frame. This one is crucial. We want to make many users aware of their Arb holdings and their delegating options. Users here have only one option. Click the “Check My Delegate” button. The result is the Info Frame

Info Frame and Share Button

This frame tells users their wallet address (the one they use on Farcaster), their ARB balance, and who their Delegate is. It gives users two options to continue. One is to delegate their tokens to a new delegate; they need to know the delegate's address, .eth name, or Farcaster username. The second option is to share their data in a new cast.

Delegate to New Delegate

If the user decides to delegate there the next feature calls the Arbitrum delegation function. First, it tells users all the information about the delegate they pick (their wallet address, ENS, and Farcaster handle). This allows users to double-check if the information is correct. After that, they can click confirm. This function requires wallet confirmation.

Success Frame and Share Button

This frame serves as a confirmation frame. Users can check the Tx Info or share the frame in the cast. The share frame function makes it super easy for other users to also confirm delegates (with just one click) to a new delegate that users picked.

Next steps

Collect feedback and build on top of our first iteration of the frame. Feel free to share your feedback in the comments below.

We plan to apply to Frame It! in the next epoch, which is managed by the Arbitrum Foundation [Introducing Frame It! An Arbitrum x Farcaster Buildathon](#).

We are also open to connecting with other initiatives and programs within the Arbitrum DAO (like (Re)delegation Week [@Arbitrum](#) , Karma [@SEEDGov](#) , GovHack [@KlausBrave](#) , Tally [@Frisson](#) etc.) and actively participate in these programs.

About us

Iggy Social is a team of builders that creates tools in the web3 social space. We have received grants from Arbitrum DAO in the past (Giveth and Gitcoin rounds). [@Tekr0x.eth](#) is also an active delegate in Arbitrum DAO, an active contributor in the Social Media Fellowship, and has previously participated in the grants council for Our Biggest Minigrants Yet on JokeRace.

If you are attending a conference in the next months you can meet us at ETHWarsaw or Devcon 2024.
