

Hey there

I wrote a fairly simple circuit and I generated a UltraVerifier for it:

Now, when I try to deploy the contract I got the following error:

Yul exception:Could not create stack layout after 1000 iterations.

Since I'm new in noir I don't really know what to do /look at.

I'm using foundry and that's my foundry.toml file:

```
[profile.default] src = "src" out = "out" libs = ["lib", "noir"] ffi = true ast = true build_info = true extra_output = ["storageLayout"]  
optimizer = true optimizer_runs = 0 via_ir=true
```

```
remappings = [ my remapps ]
```

can anyone help here? also, is there a noir discord?

thank you!!
