

Proposal Name: Access to Analysis Reports for Voters

Overall Cost: \$0 - Process Improvement

## Abstract

The proposal, titled "Access to Analysis Reports for Voters," seeks to include Draft Analysis Reports (DAR) with every proposal during the voting phase. This measure will ensure that voters have comprehensive information, facilitating better-informed decision-making.

## Motivation

The principal objective of this proposal is to provide DAO token holders with detailed reports on each proposal. These reports are already generated during the AIP process. Sharing these documents publicly will enhance transparency and enable voters to make more informed choices.

## Rationale

These draft analysis reports are already prepared by Discourse Facilitators to be shared with Special Council. Hence, it is logical and efficient to also include them with each vote on [snapshot.org](https://snapshot.org) to ensure voters are fully informed.

## Specifications

The implementation of this proposal includes the following steps:

- The Ape Foundation will ensure DAR packages are included with each proposal's vote, making these reports easily accessible on Snapshot.
- A plan will be executed to release past DAR packages, excluding private author information. DARs from the last year will be shared in a downloadable format.

## Timeline

The following steps outline the implementation timeline:

- Ape Foundation sets a date for releasing past documents.
- Ape Foundation begins including DAR packages with each live snapshot vote, adhering to AIP-1 for legal reviews and protecting private information about proposal authors.
- A new download link for the reports will be provided during snapshot voting, ensuring that the links are easily accessible.

## Overall Cost

This proposal is anticipated to incur no additional costs. The Ape Foundation already generates these reports, and sharing them with token holders will serve to enhance communication without any extra expenditure.

This is a simple and straight-forward proposal that will give voters access to information and research on each proposal. These are already generated for each proposal, so with smart redactions of personal information, these will be incredibly helpful for voters!
