

# November 2024 Rationales

## Designing and operating the reporting and information function

I voted abstain on this proposal as I was involved before. While I don't think that prevents me from voting, I don't think my amount of votes would make the difference anyway. I am supportive of the proposal overall.

## [Non-constitutional] User Research: Why build on Arbitrum?

I voted for this user research with the work across other ecosystems because this has come up as a need multiple times in the last few weeks.

## Hackathon Continuation Program

I am voting for this project without the onchain mechanism because I liked the results of the first hackathon and would like to see it continue, but I didn't see the long term success plan for the onchain mechanism.

## Restitution For Extensively Delayed ArbitrumDAO Minigrant Winners

I missed this vote, but would have voted against this because the grants were denominated in ARB and there were many other projects which have been affected in this way. I don't think going back and making this adjustment or the many other potential adjustments is in the interest of the DAO.

## [Non-Constitutional] Treasury Management v1.2

I would have voted for this proposal if I didn't miss it. I think having an empowered committee to run treasury management is a need. We must diversify in 2025 to be able to survive the next bear market or two.

## Adopt a Delegate Code of Conduct & Formalize Operations

I voted for this effort because it is a good step in the right direction.
