

I recently withdrew some AAVE from my Binance.EN account and transferred it to my [Binance.US](#) account utilizing an ERC-20 token address. The TXid shows a successful transfer. Yet, I have not seen the transaction come thru into my [Binance.US](#) account and it has been a few weeks. My understanding is AAVE uses the Ethereum blockchain for transferring assets (in this case, an ERC token). Was I wrong in thinking this? Have my assets been lost? What more could I do to find out where my AAVE tokens have gone? Any help on this discussion topic would be greatly appreciated!
