

Dai Savings Rate

Use the 'mcd:savings' service to work with the Dai Savings Rate system. In the code, this is called [SavingsService](#) .

...

```
Copy const service=maker.service('mcd:savings');
```

...

Instance methods

All the methods below are asynchronous. `join` , `exit` , and `exitAll` use [a proxy contract](#) .

`join(amount)`

Deposit the specified amount of Dai into the Dai Savings Rate (DSR) contract.

...

```
Copy await service.join(DAI(1000));
```

...

`exit(amount)`

Withdraw the specified amount of Dai from the DSR contract.

`exitAll()`

Withdraw all Dai owned by the current account from the DSR contract.

`balance()`

Return the amount of Dai in the DSR contract owned by the [current address](#) . Strictly speaking, this method returns the amount of Dai owned by the proxy contract for the current [address](#) . to work with the methods above.

`balanceOf(address)`

Return the amount of Dai in the DSR contract owned by the specified address.

`getTotalDai()`

Get the total amount of Dai in the DSR contract for all users.

`getYearlyRate()`

Get the current annual savings rate.
