

## seid query ibc client consensus-state

Query the consensus state for a particular light client at a given height. If the '--latest' flag is included, the query returns the latest consensus state, overriding the height argument.

Usage: `seid query ibc client consensus-state [client-id] [height] [flags]`

Examples: `query ibc client consensus-state [client-id] [height]`

Flags: `--height int` Use a specific height to query state at (this can error if the node is pruning state) `-h, --help` help for consensus-state `--latest-height` return latest stored consensus state `--node string` : to Tendermint RPC interface for this chain (default "tcp://localhost:26657") `-o, --output string` Output format (text|json) (default "text") `--prove` show proofs for the query results (default true)

Global Flags: `--chain-id string` The network chain ID `--home string` directory for config and data (default "~/.sei") `--log_format string` The logging format (json|plain) `--log_level string` The logging level (trace|debug|info|warn|error|fatal|panic) `--trace` print out full stack trace on errors Last updated on July 1, 2024 [consensus-state-heights](#) [consensus-states](#)
