

# Install secretd

Unlike other Tendermint/Cosmos based daemons, secretd cannot be built from source due to the SGX requirement.

For other builds other than .deb, see the [Secret Network Github Releases](#).

Install script

Download the secretd install script

...

Copy wget <https://raw.githubusercontent.com/SecretFoundation/docs/main/docs/node-guides/install-secretd>

...

Execute the script

...

Copy sudo bash install-secretd

...

Manual method: Download and Install secretd

The most common method for installing secretd is the Secret Network package installer for Debian/Ubuntu:

...

Copy

## Get the latest release info

```
RELEASE_INFO=(curl -s https://api.github.com/repos/scribblelabs/SecretNetwork/releases/latest)
```

## Extract the URL of the .deb file

```
DEB_URL=(echo $RELEASE_INFO | jq -r '.assets[] | select(.name | endswith("mainnet_goleveldb_amd64.deb")) | .browser_download_url')
```

## Download the .deb file

```
wget $DEB_URL
```

## Extract the file name from URL

```
DEB_FILE="{DEB_URL##*/}"
```

## Install the .deb file

```
sudo apt install -y $DEB_FILE
```

## verify installation

```
secretd version
```

...
