

# Query Parameters

Parameters define high level settings for staking. You can get the current values by using:

```
...
```

```
Copy secrecliqstakingparams
```

```
...
```

With the above command you will get the values for:

- Unbonding time
- Maximum numbers of validators
- Coin denomination for staking
- 

Example:

```
...
```

```
Copy secrecliqstakingparams
```

```
{  
"unbonding_time":"1814400000000000",  
"max_validators":50,  
"max_entries":7,  
"historical_entries":0,  
"bond_denom":"usct"  
}
```

```
...
```

All these values will be subject to updates though a governance process by `ParameterChange` proposals.
