

eth_supportedEntryPoints

This method fetches the EntryPoint addresses supported by the bundler. The first address is the one preferred by the bundler to use.

Request

...

```
{ "jsonrpc": "2.0", "method": "eth_supportedEntryPoints", "params": [], "id": 1 }
```

...

Response

...

```
{ "jsonrpc": "2.0", "id": 1, "result": ["0x5FF137D4b0FDCD49DcA30c7CF57E578a026d2789"] }
```
