

State

The FeeRefunder module stores one [FeeInfo](#) per [channel_id](#), [port_id](#) and [sequence](#). FeeInfo contains all the necessary info to store data about fees to properly refund relayers and return fees to the original caller of IBC messages:

- payer
- - stores an address of the smart-contract which issues `Transfer`
- `orSubmitTx`
- message;
- packet_id
- - stores an info about an IBC packet for which `ack`
- `orTimeout`
- submission relayers should be refunded;
- fee
- - stores amount of fee to refund relayers for the submission of IBC packets. [Previous Client Next Events](#)
