

Abstract

Two or three sentences that summarize the proposal.

[Created a newly designed APE NFT series based on BAYC#420 to give everyone who supports \$APE, BAYC Project an official informed social series NFT at an introductory price, once again using the power of APE to unite more people to join and support APE FAM and create a new IP branch to gather together Creating Greater Value]

Motivation

A statement on why the APE Community should implement the proposal.

[The project was carried out after we communicated with the official BAYC mod @friesfram

, first of all we made an absolute respect to the copyright holders, we started this Project after getting the support and authorization from BAYC#420, if we didn't get an approval and authorization from BAYC, we wouldn't have rashly chosen to start an APE NFT Project, keeping it real is a crucial step in the Web3 world, in a world where BAYC, \$APE is so hot, most people may not be able to easily buy a BAYC, but can buy \$APE, but \$APE, as an important financial system product of yugalab, can very intuitively reflect the financial value, but cannot do a basic social value. So we want to provide a social identity informed and empowered by BAYC MOD with a new APE NFT for more users who support yugalab]

Rationale

An explanation of how the proposal aligns with the APE Community's mission and guiding values.

[This NFT prototype comes from BAYC #420

held by the official BAYC MOD, and everything is launched with BAYC at its core, ensuring as much as possible that every participant will be a BAYC-affected user, and that we will unite as many people as possible to support the full Yugalab product line through this NFT and \$APE when those users are unable to purchase BAYC. When we are running smoothly, we will use the community funds to apply to the BAYC project team to buy BAYC as a reward for users who have made contact with the community, and also to support BAYC, everything we do will be based on BAYC]

Key Terms (optional)

Definitions of any terms within the proposal that are unique to the proposal, new to the APE Community, and/or industry-specific.

[Our team of established artists, programmers, and experienced brick-and-mortar operators (including apparel and jewelry designers, manufacturers and distributors, trendy toy designers, and ceramic production factories, as well as our proud medical CBD businesses), including Chinese and international artists and record labels are working with us to build this new APE social ecosystem.

We will co-host online and offline APE social events and parties with community artists. We will provide non-profit donations through our medical marijuana companies to holders around the world by providing pro bono medical CBD and recreational THC product airdrops in legal areas and occasional community funding to non-holders. All of the planning mentioned so far we are already underway]

Specifications

A detailed breakdown of the platforms and technologies that will be used.

[We have completed our smart contract by way of ERC721, have built a well established MINT website <https://hayc.io> (currently whitelist priority casting, we want to give more BAYC/MAYC/BAYC a whitelist priority to experience MINT), the technology base is based on the Etherchain, automatically shelved after MINT to Opensea, and has contacted the Opensea Team in the form of Email to complete the metadata audit, the smart contract part also by our good friend tycoon.eth (Punk 4513 aka Zombeanie) audit after uploading to etherscan]

Steps to Implement

The steps to implement the proposal, including associated costs, manpower, and other resources for each step where applicable.

[We currently have a HAYC Roadmap displayed on our <https://hayc.io>, and the first step we are currently discussing here is to hopefully get \$APE FAM's endorsement and support for this step, which would only require participants to make a MINT HAYC NFT at 0.07 ETH per copy, rather than simply passing these words to \$APE FAM Asking for token or dollars, I think this is not an important part of building the ecology, because we have already finished our Project through our own efforts to build it and no longer need to pay our community members who participated in the design.

When 10,000 NFT MINTs are completed we can start the second step, at this time we need some money to ensure the "loyalty" of our Club Members, we will maintain a Floor Price in the secondary market, when a community member sells his NFT at a price lower than the Floor Price. When a community member sells his NFT at a price lower than the Floor Price,

we will use the funds to buy it out and cancel the community perks that the seller has. to use our ability to build a new IP around BAYC, \$APE]

Timeline

Relevant timing details, including but not limited to start date, milestones, and completion dates.

[We have opened our MINT at 2022/3/30 16:20 GMT, and we hope to build and refine our entire \$APE eco-expansion program over the course of a year from the time this article is successfully sent. In the third quarter, we will select the best community supporters and carry out our global public welfare program, and in the fourth quarter, we will bind HAYC and BAYC to create more resource products.]

Overall Cost

The total cost to implement the proposal.

[The total cost to implement the proposal is 1500-2000 ETH. 10,000 copies of NFT at 0.1/copy, 1000 ETH to keep the floor price, 100 ETH for four quarters of offline social events, 100 ETH for artist and member co-creations, 300 ETH for global pro bono projects, and 500 ETH to keep. as preparation funds for airdrop and other new star routes]
