

## seid query dex get-latest-price

Get the latest price from a dex specified by the contract-address. The price and asset denom are used to specify the dex pair for which to return the latest price. For the price at a specific timestamp use get-price instead or for all prices use get-prices.

Usage: `seid query dex get-latest-price [contract-address] [price-denom] [asset-denom] [flags]`

Flags: `--height int` Use a specific height to query state at (this can error if the node is pruning state) `-h, --help` help for get-latest-price `--node string` : to Tendermint RPC interface for this chain (default "tcp://localhost:26657") `-o, --output string` Output format (text|json) (default "text")

Global Flags: `--chain-id string` The network chain ID `--home string` directory for config and data (default "~/.sei") `--log_format string` The logging format (json|plain) `--log_level string` The logging level (trace|debug|info|warn|error|fatal|panic) `--trace` print out full stack trace on errors Last updated on July 1, 2024 [get-asset-metadata](#) [get-match-result](#)
