

This post serves as the canonical notice of the inclusion of a proposed housekeeping item in the upcoming Executive Vote on November 1, 2023.

Revising Executive spell Review Checklist (not included in Spell)

Initially, we planned to propose this housekeeping item in the Spell. The proposal concerns revising the Executive spell review checklist - specifically, removing the requirement to add the Spark spell deployer address as a comment to `addresses_deployers.sol`

This checklist requirement is superfluous. The deployer of a specific Spark spell is on-chain information that can be easily found through Etherscan. Although the checklist requirement in itself is not a significant effort, many “small” items such as this can pile up and negatively impact the workflow.

After further discussions with the dev teams, we’ve decided to remove the Spell Review Checklist housekeeping item from the Executive Spell. The revision of the checklist will still be implemented; however, there is no need to include this item in the Executive Spell, as it is not actioned in the code of the spell itself.

Adding GUSD and USDP Jar and SwapInputConduit Contracts to the Chainlog

In [December 2022](#), a GUSD & MakerDAO partnership for institutional rewards was rolled out. In order for MakerDAO to receive the GUSD rewards, two contracts were deployed: the `RwaSwapInputConduit2` and `RwaJar`. At the time, discussions were had about adding these contracts to the Chainlog, but these discussions were not finalized.

Recently, MakerDAO entered into a similar [partnership with Trident](#) to receive USDP rewards. This deal also requires deploying the above-mentioned contracts.

Because these contracts are providing revenue to the protocol, they should be added to the Chainlog. The Chainlog serves as the authoritative source of truth for protocol contracts and frees us from reliance on Forum posts. Content on the Forum is neither immutable nor guaranteed to be available at all times.

The Governance Facilitator and dev teams therefore propose adding these four contracts to the Chainlog as:

- `MCD_PSM_GUSD_A_JAR`
- `MCD_PSM_GUSD_A_INPUT_CONDUIT_JAR`
- `MCD_PSM_PAX_A_JAR`
- `MCD_PSM_PAX_A_INPUT_CONDUIT_JAR`

[@ecosystem-team](#), please formally confirm submission of the single proposed item (Adding GUSD and USDP Jar and SwapInputConduit Contracts to the Chainlog) for the next Spell.
