We are a governance group composed of ex-Michigan Blockchain members. Our team is currently made up of five individuals, all of which are deeply steeped in the crypto space and have multiple years of participation in protocol governance. With delegation history for DEXs, money markets, L2s, liquid staking protocols, and stablecoins, we're acclimated with a breadth of sectors. We bring a diversity of experience to DAOs—our members have consulted for companies like Immutable and dYdX, worked at crypto investment and trading firms, set up various validator nodes, and run educational events for university students. Our current team led the Michigan Blockchain ARB delegation from the launch of Arbitrum governance till December 2023 and maintained 100% voting participation. Our goal is to continue contributing to the Arb DAO going forward in a more professional capacity by actively imparting our perspective on proposals, helping formalize governance operations, and facilitating the growth/maturation of the Arbitrum ecosystem.
