

RMPL is a DeFi protocol with an elastic supply model. This means that the total supply of RMPL is constantly changing via a Rebase, the exact date and time of the Rebase is random to prevent price manipulation and exploitation by bots.

With its partnership with Yellow and its recent Bithumb Global exchange listing (more coming soon), RMPL is becoming a crypto to hodl in any portfolio.

Adding RMPL/ETH pool to list of pools eligible for UNI rewards would be extremely beneficial to both Uniswap and RMPL. Let's make it happen.
