

Daily Trade Volume & Fees

Description

This dataset provides the aggregate daily trade volume for all Curve DEX'es, as well as daily fees & admin fees generated from these trades. Data is gathered for all DEX's from their inception date, however individual rows are omitted if the trade volume is below 1 USD. For the pool_name column, the designated names do not always follow the convention of "token A-token B", so it is advised to visit Curve's documentation to learn more.

Schema

- day - date
- project_contract_address - contract address of the DEX
- pool_name - name of the DEX (usually combination of the Tokens, but there are exceptions with special names)
- daily_volume_usd - daily trade volume in USD
- admin_fee_usd - daily fees accrued by DEX, designated for the admins and governance token holders
- fee_usd - daily fees accrued by DEX, designated for LP providers
- token_type - type of DEX (stable or volatile)
-

The dataset uses day and project_contract_address as the primary keys.

Potential Use Cases

- pool specific trade volume prediction
- automated LP strategies
-

Use example

...

Copy from `giza_datasets` `import DatasetsLoader`

Usage example:

```
loader=DatasetsLoader() df=loader.load('curve-daily-volume-fees')
```
