

I'm sorry, I'm not sure that this sentence/question is appropriate for this section.

1. I would like to ask / offer what do you think the chances are that Uniswap, can become something more than an exchange and liquidity pool.

Why wouldn't Uniswap offer lending and borrowing or insurance services? With a flexible management model, perfect reputation, and such a team, I think Uniswap would do the job of Compound, Aave and others just as well.

What do you think uniswap could become more than just Swap/Pools?

1. And the second question, we know that Uniswap v3 will appear soon. Does this mean that the "UNI" token will be the native token of the third version?
