-

Description

On the 15 Mar 2020, around 9pm UTC the following param-change proposal was submitted:

...

```
Copy { "title": "Rwd Change", "description": "This is transaction to test a parameter-change for rewards.", "changes": [ {
  "subspace": "distribution", "key": "baseproposerreward", "value": "0.999000000000000000" }, { "deposit": [ { "denom": "uscrt",
  "amount": "10000000" } ] } ] }
```

...

At around 3am UTC of the following night the proposal got accepted, and as a result the network halted, with following error:

...

```

+0x13a\n" Mar1605:36:48ip-172-31-44-28enigmad[20612]: E[2020-03-16]05:36:48.395] Connection failed @ sendRoutine
module=p2p
peer=842822b88cb5762ba99cee50a37156c6d0a6c452@149.248.55.89:60440conn=MConn{149.248.55.89:60440}
err="pong timeout" Mar1605:36:48ip-172-31-44-28enigmad[20612]: E[2020-03-16]05:36:48.402] Stopping peer for error
module=p2p peer="Peer{MConn{149.248.55.89:60440} 842822b88cb5762ba99cee50a37156c6d0a6c452 in}"err="pong
timeout"
...

```

When the vote passed, the distribution module parameters changed to:

```

...
Copy community_tax:"0.020000000000000000" base_proposer_reward:"0.999000000000000000"
bonus_proposer_reward:"0.040000000000000000" withdraw_addr_enabled:true
...

```

- The problem occurred because the sum of base proposer reward
- and bonus proposer reward
- can't be greater than 1 i.e. $0.999 + 0.04 > 1$
- This results in miscalculations of the rewards and fees.
- The cause is a bug in Cosmos SDK in the parameter value validation, causing the proposal to pass despite being invalid. More on that here: <https://github.com/cosmos/cosmos-sdk/issues/5808>
-

Additional Notes

Another invalid proposal was on voting period, and by itself would have caused the network to halt as well:

```

...
Copy "changes": [ { "subspace": "distribution", "key": "bonusproposerreward", "value": "\"0.999000000000000000\"" } ]
...

```

Action Items

- <https://github.com/scrtlabs/SecretNetwork/issues/95>
- <https://github.com/scrtlabs/SecretNetwork/issues/97>
- <https://github.com/scrtlabs/SecretNetwork/issues/104>
-

Recovery Process

1. Logged in to the testnet bootstrap machine.

2. Exported state from the last "rounded" block height:
- 3.

...

Copy enigmadexport--for-zero-height--height=170000>state_export.json

...

1. Removed all references to proposal ids4
2. and5
3. in:
- 4.

...

Copy "gov":{ "deposits":[...], "proposals":[...], "votes":[...], ... }

...

1. Made sure the distribution
2. parameters still make sense:
- 3.

...

Copy "distribution":{ "params":{ "base_proposer_reward":"0.010000000000000000",
"bonus_proposer_reward":"0.040000000000000000", "community_tax":"0.020000000000000000",
"withdraw_addr_enabled":true }, ... }

...

1. Erased the coins
2. in possession of the gov
3. ModuleAccount:
- 4.

...

Copy "auth":{ "accounts":[{ "type":"cosmos-sdk/ModuleAccount", "value":{ "coins":[{ "name":"gov" }], ... }, ... }

...

1. "Refund" coins to the account that deposited to these proposals on the first place i.e. added to account's balance in:
- 2.

...

Copy "app_state":{ "auth":{ "accounts":[{ "value":{ "coins":[{ "amount":... }] } }] } }

...

1. A problem occurred with staking, described at: <https://github.com/cosmos/cosmos-sdk/issues/5818> Changed the following:
- 2.

...

Copy "distribution":{ "delegator_starting_infos":[{ ..., "starting_info":{ "...", "stake":"999990000.000000000000000000" }, ... },
...], ... }

...

To this:

...

Copy "distribution":{ "delegator_starting_infos":[{ ..., "starting_info":{ "...", "stake":"990000000.000000000000000000" }, ... },
...], ... }

...

1. Then a problem occurred with the compute

2. module:

3.

...

Copy panic:create wasm contract failed:WasmError:Filesystemerror:Fileexists (os error17)

...

This one got fixed when deleted the.enigmad/.compute directory.

1. Reset state:

2.

...

Copy enigmadunsafe-reset-all

...

1. Restarted the node.

2.
