

The core and heart of the Easy Track is the EVMScriptExecutor

contract which is responsible for enacting the Motions. Among other roles, it has been granted the Aragon ACL permissions to make token transfers through Aragon Finance app. The current permission also limits the amounts of tokens for the single transfer the EVMScripExecutor

makes ([snapshot on the matter](#)):

- 1,000 ETH
- 1,000 stETH
- 5,000,000 LDO
- 100,000 DAI

With the [proposal](#) to recognise & fund Lido entities in DAI (PML / ATC / RCC) the actual one-time transfer limit for DAI required for smooth operations should be significantly increased from the current 100,000 DAI. We propose to set it at 2,000,000 DAI per single transfer, and overall limits to be controlled by respective committees & supported with the LIP-19 time-based limits.

Please, share your feedback! The proposal implementation is to go along with the setup of new EasyTrack motion factories for payments as described in [detail in this post](#).
