

Turns out my issue was in the header. I had ticker

instead of `numera_i_ticker`

like the example code. Changing to `numera_i_ticker`

gave me 100% live tickers matched.

The documentation on this should be clarified. It currently says the following which does not mention a `numera_i_ticker` option nor explain whatever the semantic difference is.

A cusip

, sedol

, or ticker

column - values must be valid tickers associated with the ticker type in the header.
