

Hi guys! Before writing my first AIP, I would like to discuss with you the topic of opening a Web3 University. I'm interested in your thoughts. In the prop house, I outlined briefly how it should work. The AIP will be formed more and more clearly. If the guys from Boring Security join this with their experience, it will be great.

Briefly, the proposal refers to the opening of a university with the training of Web3 specialists in various fields divided into groups, with mandatory attendance and exams, followed by the issuance of diplomas in the SBT token format.

It is planned to start with a discord server and subsequently move to its own site with personal accounts of students and teachers, etc.
