

API

Conduit exposes a gRPC API and a REST API.

gRPC API

The gRPC API is by default running on port 8084. You can define a custom address using the CLI flag-grpc.address . To learn more about the gRPC API please have a look at the[protobuf file](#) .

REST API

The REST API is by default running on port 8080. You can define a custom address using the CLI flag-http.address . It is generated using[gRPC gateway](#) and is thus providing the same functionality as the gRPC API. To learn more about the REST API please have a look at the[API documentation](#) ,[OpenAPI definition](#) or run Conduit and navigate to<http://localhost:8080/openapi> to open a[Swagger UI](#) which makes it easy to try it out.[Edit this page](#) [Previous Build from Source](#) [Next Dead-letter queue](#)
