My Bio

I've been a contributing member of the Ethereum community since 2015 & received a masters degree in digital currency in 2016.

As community manager for [Slock.it](#) and TheDAO, I helped form the community around TheDAO and led every angle of the crisis response effort following TheDAO Hack. I co-founded the White Hat Group, which secured the at-risk funds (10% of the total supply of ETH) during TheDAO hack and one year later rescued \$210 million dollars worth of crypto assets following the Parity Multisig Hack. I also audited early versions of the Aragon and MakerDAO systems with the WHG.

In 2016 I co-founded Giveth, a crypto donation platform that radically empowers individuals and communities to affect real change in a transparent, decentralized way. I co-founded DAppNode in early 2018 and co-founded the Commons Stack in 2019. The Commons Stack's pilot Commons, the Token Engineering Commons was launched in early 2022. We are now taking those learnings, to create a bonding curve launchpad called the Quadratic Accelerator (q/acc).

In 2021, I co-founded General Magic, a web3 design and dev studio focused on web3 impact products. I led the creation of Praise spinning it out to its own org in 2022, and am currently developing Pairwise, a novel voting system for DAOs as well as unicorn.eth a brandable wallet platform . I have contributed to dozens of other projects as well, most notably, iden3, PolygonHermez, and brightID.

I am also a top delegate for ENS, Optimism and Gitcoin and lead a crypto focused burning man camp, DECENTRAL, and helped launch it's sister camp, BlockHaus, an art car with a steam room on top, that will be on esplanade this year

I have too much going on for sure but am supported by an awesome team of around 70 people to make all these things happen, and sometimes I lean on them for advice for governance matters.
