

I don't know how to reach anyone from the Uniswap wallet devs so I will be spamming this until somebody fixes the price feed for Uniswap wallet.

Lets explain. Pulsechain is a hard fork of Ethereum. This means it retains the complete state of the Ethereum blockchain, including all transactions, user accounts, and smart contract interactions. It is basically a copy of the Ethereum blockchain. The tokens on Pulsechain are copies only. They might have some MEME values for dummies who fall for it.

Stupid Coingecko tracks the Socks price from Uniswap and PulseXchange. Pulse exchange trades the fake SOCKS on pulsechain only. Look it up in Coingecko/Socks/Markets.

Uniswap wallet takes the same stupid price feed. This is misleading any potential newcomers into believing, that pulsechain SOCKS are legit.

This is ridiculous!!!
