AVAIL powers web3's unification layer

The Avail Unification Layer consists of Avail DA, Nexus and Fusion which together form a unification layer for web3 that addresses blockchain scalability, interoperability and security. AVAIL is a key part of the Avail Unification Layer used in Avail DA, Nexus and Fusion.

If you want to read about these in more detail, you can refer to [our blog\(opens in a new tab\)](#).

Staking with AVAIL

Anyone can stake AVAIL throughout Avail's infrastructure to earn staking rewards. We will release detailed staking guides along with our products as they are released.

For now you can refer to the Avail DA staking guide [in our docs](#). If you want to read about staking on Avail in more detail, you can refer to [our blog\(opens in a new tab\)](#).

Governance with AVAIL

The AVAIL token will play a key role in governance throughout the Avail ecosystem. Avail will be adopting a phased approach to governance. More information will be published on this soon.
