

Guys, what do you think about little update to Earn page ?

Right now APR value is updated in < Real Time > which make little sense actually because of big volatility.

So I come across with an idea - what if we introduce drop-down menu with several option to user, which allow him to chose time-context for APR statistics.

So, as I said, right now we have < Real Time > or < RT > mode (which can be by default) and I propose to add extra modes:

< WA > : 7 days average

< MA > : 30 days average

< YA > : 365 days average

thats it.

cheers.
