

# Vesting

The Vesting page shows users a complete list of deposits and rewards the connected wallet has made in the protocol. From here, users can withdraw any unlocked deposits or rewards available. The Vesting page is available at: [staking.illuvium.io/vesting](https://staking.illuvium.io/vesting)

## Sort and Filter

The Vesting page includes sort and filter capabilities to allow users to see the vesting items they are most interested in.

## Filter

Users can filter the Vesting page by Deposits, Rewards, or Unlocked items.

## Sort

Users can sort the Vesting page by Amount, Weight and Unlock date.

## Vesting Table

The Vesting Table contains all the necessary information about a vesting item, whether a deposit or reward.

## Pool

The pool name where the deposit or reward item is currently deposited.

## Amount

The token amount relating to the deposit or reward item.

## Source

The source type can either be 'Reward' or 'Deposit'.

## Date Staked

The date on which the deposit or reward item was created and added to the protocol.

## Unlocks In

The date on which the deposit or reward item has fully vested and becomes unlocked so that a user can withdraw it from the platform. To check the exact time the item unlocks, hover over the value, and the interface will show the precise time in a tooltip.

## Withdraw Items

When a vesting item becomes unlocked, an active Withdraw button will appear. There are two possible types of Withdraw journeys. Single withdraw, which only applies to Staking v1 Deposits, and multiple withdraw, which applies to Staking v2 deposits from the same pool, Staking v1 Reward items, and Staking v2 Reward items.

## Staking v1 Deposits

Staking v1 Deposits can be identified by the v1 badge displayed at the start of the relevant row in the Vesting Table. Staking v1 Deposits can only be withdrawn one at a time, and as such only the withdraw button will be visible, when this item becomes unlocked.

## Staking v1 Rewards

Staking v1 Rewards can be identified by the v1 badge displayed at the start of the relevant row in the Vesting Table. Staking v1 Rewards can be withdrawn in multiples. This can be done by selecting the checkbox next to the eligible vested items.

## Staking v2 Deposits

Staking v2 Deposits can also be withdrawn in multiples and include a checkbox for eligible items next to the withdraw button.

## Staking v2 Rewards

Like Staking v1 Rewards, Staking v2 Rewards can also be withdrawn in multiples by selecting the checkbox next withdraw button for eligible items.

## Total to Withdraw

When withdrawing multiple items from the protocol, the Total to Withdraw component will appear at the bottom of the page and show the total amount of withdrawn tokens. This shows the user how many items have been chosen to be withdrawn and the total token amount these items add up to.
