

Hi everyone

Thanks for taking the time to read this proposal - we hope you'll support \$SAND

My name is Sebastien BORGET, I am the COO & Co-Founder of [The Sandbox](#), a virtual world where players can build, own, and monetize their gaming experiences in the Ethereum blockchain using #NFTs

and \$SAND, the platform's utility token.

The Sandbox is a pioneer in the space of blockchain gaming, NFTs and true digital ownership - we have been really pushing forward the industry and awareness in general

Here are all the smart-contract audits, \$SAND was audited by Certik and Solidified

We are combining user-generated content (UGC) with NFTs, enabling anyone to make its own NFTs using VoxEdit (our 3D Editor). Then you can own, trade and monetize these NFTs as you want.

You will be able to enter a virtual world where you can build, own and monetize games, next to gaming giants Atari, Square Enix and more!

The Sandbox metaverse invites players and creators to

- Make NFTs with VoxEdit #Voxels
- Sell and Trade them on our #Marketplace
- Create fun games with our #GameMaker
- Play, Stake & Earn \$SAND #Crypto
- Play & Create with huge IPs and Brands

\$SAND will enable players to create, play, own, govern, trade and earn within The Sandbox virtual world gaming platform. It is the ERC-20 token that will be used all across The Sandbox metaverse.

\$SAND tokens have the following utility on The Sandbox platform

1/ Medium of exchange

: Players can potentially collect SAND through gameplay, and subsequently spend \$SAND to play games, purchase equipment, or customize Avatar characters. Creators can spend SAND to acquire ASSETS and LAND. Artists can spend SAND to upload ASSETS to the Marketplace and buy GEMS for defining item rarity.

## 2/ Governance

: \$SAND allows holders to participate in governance decisions. SAND owners can vote themselves or delegate voting rights to other players of their choice.

## 3/ Staking

: Users can stake \$SAND tokens to earn rewards, as well as GEMS and CATALYSTs for ASSETS creation.

We've been working since July 2018 (2 years ago) on the new version of the game, 3D, multiplayer, multi-platform and using blockchain technology to offer a virtual world built on the Ethereum blockchain, where players can build, own, and monetize their gaming experiences.

We've raised \$4.5M USD from reputable investors on our Seed Round, including from Hashed (#1

cryptofund in Korea, True Global Ventures and Square Enix the video game company)

We have more 60 partnerships with award-winning game companies such as Atari, top decentralized games such as Crypto Kitties, major brands such as Shaun the Sheep, Rollercoaster Tycoon or Care Bears to build a fun, creative "play-to-earn" Gaming platform, owned and made by players.

With The Sandbox, we aim to overcome these limitations by building a decentralized gaming platform where creators are able to craft, play, share, collect, and trade without central control, enjoying secure ownership with the ability to earn cryptocurrency (\$SAND). This ownership will be established and guaranteed through the use of NFTs, where every in-game item will have a unique and immutable blockchain identifier.

We do believe millions of players are interested in exploring the benefits of decentralization, interoperability, and the creator's ecosystem.

Looking forward to hear back and thank you for your vote!

We're looking forward seeing you in our community

Kind regards

Sebastien
