Carrie Lyn Henman

Nomination Statement

I would like to build a strong internal systems placement for ApeCoin DAO, to more efficiently and swiftly serve the community and get proposals addressed in a more timely manner and in unity between like minded proposals. In turn creating a greater impact with our funds and community members.

Motivation

I'm motivated by knowing we can make a greater difference with less funds, less time, and more impact through building a strong, efficient and well structured internal systems. I've seen many amazing proposals submitted several months in advance and still not get addressed in time to execute.

Rationale

Managing multiple 10 figure businesses has required that I build strong teams, with effective systems placement. Launching brands/artists require the essential team members, resources and problem solving skills that I have built several times over.

Specifications

My web2 business was a Business MGMT firm for over 25+ years managing non-profits; law firms; artists; clothing brands; record labels, etc. This has groomed me into a well rounded, resourceful, successful potential candidate.

Concluding Statement

I am one of the best candidates because of my ability to adapt like water, apply my entrepreneurial problem solving skills and various resources across an array of industries to the DAO, providing us as a whole, a stronger support system and partners. All of which will insure we are building a STRONG foundation to make a greater impact and execute long term vision that is built to weather the market's harsh storms.
