

DeFi Tokens

Summary

DeFi tokens are tokens that represent a DeFi position. DeFi tokens are obtained by depositing underlying tokens, or other DeFi tokens inside of [DeFi projects](#) .

For example, depositing [WETH\(opens in a new tab\)](#) into [Yearn\(opens in a new tab\)](#) you will obtain [yvWETH\(opens in a new tab\)](#) and start generating yield on this.

Endpoints

You can use the [tokens endpoint](#) , filtering by defiTokens
