

title: [ARFC] Aave V3 Caps increase - 2023.08.31

author: Alice Rozengarden [@Alice](#) - Aave-chan initiative

date: 2023-08-31

Summary:

This proposal is asking for feedback from the risk providers on various assets across multiple networks that are nearing the full use of either their supply or borrow caps.

This Proposal is compatible with the Direct-to-AIP Framework

Motivation:

Several caps on assets across the various V3 markets are reaching critical levels but haven't been included in [the recent proposal by ChaosLabs](#). Thus, the goal of this proposal is to ask about their status and the risk associated with the potential increase of their caps. Letting those caps reach 100% while it could have been avoided would result in a sub-optimal experience for the user of AAVE and of the product built around the protocol as well as a loss of potential revenue.

Specification:

The following assets are concerned by the proposal

Supply Caps:

Chain

Token

Supply cap

Utilization rate

Proposed Supply cap

Increase (%)

Total supply

% of the total supply

The author hasn't received any compensation from any third party for this proposal.

Next step:

1. Get feedback from both risk providers
2. If they reach a consensus on some assets ask them to use risk steward.
3. Should only one of them agree on the raise of a caps for some assets, escalate the concerned assets to an AIP as they would fit the criteria for the Direct-to-AIP Framework.
