

A proposal was recently listed on [Mintscan](#) for an AEVO-USD market. Chaos Labs supports the addition of AEVO-USD to the dYdX Chain and recommends listing under liquidity tier 2.

In line with the criteria for introducing a new market, as detailed in the [v4 documentation](#), we present our analysis and the rationale behind our recommendation for AEVO's listing.

Analysis

AEVO is currently listed for spot trading on exchanges, including Binance, MEXC, Bybit, KuCoin, OKX, and Gate, with its launch on March 13, 2024 (CoinGecko). Recent 24-hour Perpetual volumes for AEVO have also recently been north of \$362m, showing interest in trading it. With aggregate liquidity of \$1.4m within a $\pm 2\%$ range, AEVO's price stability is deemed robust enough against potential manipulation, qualifying it for listing on the dYdX Chain.

Liquidity Tier Recommendation

AEVO fulfills the requirements for a Long-Tail asset as defined in the dYdX [v4 documentation](#), and, therefore, we suggest categorizing it under liquidity tier 2.

As outlined in the v4 documentation, liquidity tiers specify the margin requirements needed for each market. They should be determined based on the relative market's spot book depth and the token's market capitalization.

AEVO aligns the Oracle liquidity requirement at 5 out of 6 Oracle sources, but because it is a new market, it qualifies under the [recently listed markets criteria](#) with at least 4 qualifying oracle sources and 2 with more than \$30k liquidity within 2%. All 6 of these are both robust and queryable sources according to the [dYdX listing criteria](#). AEVO's recent 24-hour spot trading volumes are \$232m, qualifying it as a Long-Tail asset on the dYdX Chain.

Below are the volume and liquidity depth metrics for the proposed AEVO oracle sources:

Given that it meets the Long-Tail criteria with 6 qualifying oracle sources, we suggest listing AEVO at a liquidity tier 2.
