

Workspaces

Welcome to the step-by-step guide for using Workspaces within the Actions SDK, a critical component of AI Actions. Workspaces in the Actions SDK provide a unified, user-friendly environment for managing and monitoring your ZKML workflows. This guide will walk you through setting up and effectively using Workspaces, ensuring you can leverage their full potential for your development needs. Please, make sure to follow the [installation](#) instructions beforehand

Create your Workspace

From your terminal, you will use the Giza CLI for starting the Workspace creation. First, make sure you are already registered and logged in into the Platform. If not, you can create your user and log in [here](#) .

...

Copy `gizaworkspacescreate`

...

After the process of workspace creation, you will get a personal URL pointing to your Workspace. For detailed information about workspace commands go [here](#) .
