

Hello all,

I would dearly love to get feedback from anyone in this forum on the ideas outline here:

<https://github.com/andytudhope/theStateOfUs>

Any flaws in my premises, any attacks I can't see, any problems with the maths - please help me find them and make this the best it can be for all of us.

Let me know if you have any problems accessing the spreadsheet[here](#) for the "really good" stuff.

Also, there is a Meta bounty in that repo of 34 704 SNT for anyone who can disprove it all. And also rewards for help with further optimisations and better, more formal proofs.
