

I'm trying to find oracles, or an API so that I can access Secret Network prices from a script (python).

So far I've found...

Secret Oracles... although the article talks more about generating random numbers than anything else.

sct.network

Secret Feature: Secret Oracles | Used in Gaming, NFTs & More!

Secret Oracles on Secret Network empower decentralized, trustless sources of private randomness that can be used by other contracts for use cases such as gaming, NFTs, and more!

Band Protocol on Secret Mainnet...

sct.network

Band Protocol Live on Mainnet! | Secret Network Blog

Secret Network has completed the implementation of Band Protocol to bring decentralized and scalable cross-chain oracles to Secret - with support and documentation officially live!

However I cannot find any mention of these projects on this forum. Not sure if both Secret Oracles and/or Band Protocol has since been abandoned on Secret?

What is there current/live price feed on Secret, or used by Secret defi, such as Shade?

I need to inform myself more about oracles in general... do they include an API accessible from python, or only accessible from a Secret smart contract (requiring gas fees)?
