

Why not incentivize and bring even more liquidity on the Arbitrum chain through a program similar to the recent Manta New Paradigm that has achieved tremendous success present on the Layer2 Manta Pacific

In my opinion we should evaluate this, take the best protocols on Arbitrum and make an agreement with them to distribute rewards to users

Plus we allocate \$3M of \$ARB for participants.

\$ARB, Circle's native \$USDC and Lido's \$stETH could be used as eligible assets for deposit with a 69-day lock

Extra rewards for NFT Odyssey holders and those who move funds from Manta Pacific to Arbitrum
