

AA14 initCode must return sender

The address of the smart account deployed with theinitCode provided does not match thesender address provided in the user operation.

Possible solutions

- Verify that thesender
- address was generated deterministically from theinitCode
- . (consider leveraging functions like[getSenderAddress](#)
-)
- Verify that the factory address in theinitCode
- is correct (the factory address is the first 20 bytes of theinitCode
-).
- Verify that theinitCode
- is correct.
- If all else fails, investigate why theinitCode
- deploys to a different address than expected using tools like[Tenderly](#)
- .
