

Context:

The SNE core unit mandate in the context of endgame means

- Maker vault on Starknet: Currently paused. It would need to be picked up by a subDAO which would either implement the Maker vault design, or another design (e.g., Aave)
- Teleport: Currently paused. Could potentially restart if the L2 strategy was re-evaluated or if a subDAO was to pick it up, in collaboration with L2Beat
- Starknet bridge: In scope. Requires additional work to complete [the migration to Cairo 1.0](#) (details below). Without migration, the bridge will stop operating after Regenesiis, and user funds will be lost or very hard to recover.

After the completion of the Starknet bridge milestone, we will unwind the CU and the members of the Starknet CU will be joining/creating ecosystem actors.

Additional work required to complete Starknet bridge:

Cairo 1.0 rewrite is mostly completed. Here are the next steps to complete the SNE mandate:

- Adapt to expected changes to contract syntax (waiting for Starkware, expected to be announced this week)
- Adapt to "great interface migration" changes (waiting for OpenZepelin, should be clear with 1 month)
- Align with Starkgate to make sure we are compatible
- Audit Cairo 1.0 contracts (waiting for above points)
- Deploy new DAI contract - highly recommended to be done after wallets and Starkgate to migrate before
- Deploy bridge contracts
- Update message cancelation logic after Starknet will start to include failed transactions and its l1->l2 messaging system will have to adapt (post regenesiis)

Budget:

- The CU wallet currently holds 22k DAI and Starkware owes the Core Unit 20k DAI
- The work listed above require 1.5 FTE for a month, spread over the next 6 months
- We will also have to pay for the audit of the new contracts (based on previous audit, estimated to 25k DAI)
- We might have to request a small (10-30k DAI) budget extension, depending on the audit costs and the exact timing of Regenesiis
