

Connector Specification

[Specification](#) contains general information regarding the plugin like its name and what it does.

spec.go

This file defines the public-facing characteristics of the connector such as its name and capabilities. Begin by updating placeholder values with the specific details of your connector.

```
var version =  
"v0.1.0"  
  
// Specification returns the connector's specification. func  
Specification ( ) sdk . Specification { return sdk . Specification { Name :  
"file-sync" , Summary :  
"" , Description :  
"" , Version : version , Author :  
"" , } } Edit this page Previous Conduit Connector Template Next Developing a Source Connector
