

Thanks to [@BLUE](#), [@Penguin.Soldier](#), [@vigilant](#) and others for input.

Composable AVC has held two meetings this quarter focusing on

1. Governance Scope
2. Accessibility Scope

so far.

Meetings have shifted to text only and been extended from 15 to 30 minutes to support text contribution and thinking.

The new format we arrived is structured like this:

5-10 minutes of recap, where ADs give input into discussions happening in other AVCs

20-25 minutes of scope discussion

The main focus of Composable is and will be to find ways to make governance more informed and more efficient.

We propose the following additions to Scopes, as of now:

1.) Governance Scope

AVCs should require ADs to act as ecosystem intelligence agents (thanks ReFi).

ADs should present a short, neutral but comprehensive overview of what is happening in the DAO. This builds institutional knowledge and helps to avoid that some experts give the same presentation to two or more AVCs.

Ideally the DAO toolkit would contain a tool that allows ADs to enter well-tagged notes from meetings that AVC members can use. This will also help with training CAIS in the future.

2.) The DAO should support anonymous voting. This will need changes to the Accessibility and Support Scope.

Anonymous Voting reduces tactical voting and dampens swarm behaviour. We think there is a very valid reason why voting is anonymous in nearly every democratic country. This AVC is technology neutral. We can imagine that such voting can be done on-chain in zK chains or other privacy preserving blockchains with smart contracts.

We kindly ask ADs to help us in finding the relevant scopes where our intentions apply to and to further specify our vision.

Tagging [@LDF](#) and [@divine_economy](#).
