

Not possible to interact with Secret Network at all, deleted the wallet, deleted the extension, wiped all Chrome data, history, cache, etc, etc.

Reinstalled Keplr restored wallet with seed and nothing works, asks for viewing keys again, they fail to transact, cannot swap, or send or do any network interaction.

Only thing that works is taking the seed to another device or browser.

WTF is going on?

Do I have to completely delete Chrome and reinstall it? How deep is this bug???
