

Paymaster, Bundler, And The Biconomy Dashboard

Now, let's setup our biconomy dashboard. Follow the instructions [on this page](#) .

Before continuing onto the the next step be sure that you have completed the following:

- Created an account on the Biconomy Dashboard.
- Register a new paymaster on the Dashboard.
- Get the [Paymaster URL](#)
- and
- bundler URL from dashboard.
- Set up a Gas tank with some Base Goerli Eth. We recommend around .02 Eth to
- start.
- Whitelist the safeMint
- method of the NFT smart contract under [Paymaster Rules](#)
- on the dashboard.

Missing any of the above steps causes a lot of [common errors](#) to occur. This is a good checklist to have when building new dApps utilizing the Biconomy SDK. :::

Now with our smart contracts ready to go along with our Paymaster and Bundler URLs let's get started with our frontend.
