C:\Users\admin>

Need step by step instructions for a student with no experience in Rust. I'm just learning. If you give advice on what to do, write how to do it, where to download from and how to install it. The link says it should be:

[

Rust003

835×359 25.8 KB

](<https://global.discourse-cdn.com/standard17/uploads/enigma1/original/2X/d/df53b9837229c00da156485bbe76ddfb5de2d8a.png>)

Where can I download it? How to install? Why are the instructions so badly written? The following link with red arrow [leads here](#) – what to do with the archive downloaded from Github?
