

What header are you using? I found that switching from ticker

to numerai_ticker

did wonders for my match rate.

[Tips on mismatched ticker names?](#) [

Signals

](/c/signals/10)

Turns out my issue was in the header. I had ticker instead of numerai_ticker like the example code. Changing to numerai_ticker gave me 100% live tickers matched. The documentation on this should be clarified. It currently says the following which does not mention a numerai_ticker option nor explain whatever the semantic difference is.

A cusip, sedol, or ticker column - values must be valid tickers associated with the ticker type in the header.
